About me

From a starting background in Physics, I have become a thorough Angular developer fond of clean code and up-to-date best practices!

In my everyday work, I look for the best quality Angular code, thinking about the most performant and maintainable architecture and always glad to start a large refactoring.

As we used to hear, a good engineer is not technology focused as he adapts his technology needs to the problem he faces. Unfortunately, I might not be a good engineer because I am completely Angular focused! :D

Favorite techs

- Angular
- Rxjs
- Material / CDK
- Nx

- NGXS
- NgRx
- Jest
